

Intelligent Cylindrical Lever Lock

This product is ideal for interior classrooms, store rooms, and other interior lower traffic areas

The Intelligent Cylindrical Lever Lock conforms to Grade 1 category by:

>The lock is available in 2 functions **ENTRY & STOREROOM**

The Intelligent Cylindrical Lever-Lock from INTELLIKEY® is an electronic version of the lock which meets the latest Americans with Disabilities Act (ADA) specifications.

This development brings lock, key and access control and convenience even closer, and will replace most existing mechanical lever and knob locksets with virtually no additional modifications to the door.

The design carries new and unique features, such as a drill resistant cylinder—a major requirement for high security locking applications. High reliability is achieved by the 'no moving electrical contact' design between the electronic cylinder and the lock body. For further security against forced entry, the outside lever moves freely when the door is locked.

> THIS INSTALLATION CAN BE CARRIED OUT IN 30 MINUTES

AVAILABLE IN THREE FINISHES

BRUSHED CHROME FINISH
(US26D)
