INTELLIKEY Gate Lock meets certain criteria established by FAA

FEDERAL AVIATION ADMINISTRATION

> The lock is available in 2 functions **SLIDING & SWING GATES**

The INTELLIKEY Gate Lock brings all of the INTELLIKEY system features - standalone operation, audit trail, and access control by user, time, date and location - to swing gates. The Gate Lock is fully compatible with INTELLIKEY's ACS4000, allowing it to be added to an existing INTELLIKEY system, or to provide a secure alternative to padlocks on your site perimeter.

The lock mechanism is constructed of stainless steel, is weatherproof, easy to install, and as a captive chain is used in the locking mechanism, it automatically compensates for the usual sags and misalignment inherent in swing gates.

For palisade and other gates that maintain alignment, a sliding bar solution is also available on request.

INTELLIKEY Gate Lock Features

Standalone operation: no wiring or conduit required

Access Control: Access on both sides of the gate

Versatility: Uses the same Intelligent Keys and software as the INTELLIKEY ACS4000

Affordability: No costly gate adjustments

Quality: Weather protected electronic cylinder on both sides of gate

Full-featured Lock Controller integrated into hardened steel housing

INTELLIKEY GENIUS AT YOUR FINGERTIPS
