

# Remote KPU Key Processing Unit

Audit or update keys  
at remote locations

The Key Programming Unit (KPU) transfers programming and status information between an INTELLIKEY Key and your access control system database. INTELLIKEY's Quantum and EZ123 software makes use of the KPU to program and update Intellikey Keys, and to read audit trail information from the key. When the key holders access or feature requirements change, the KPU easily updates the key's programming. The KPU is powered by 9V DC power supply and connects to a serial communications port on your personal computer by means of a 9 D-type female connector.

> NOTE: Locks can be audited with LPU or by reading end-user keys with KPU. USB adapter included with KPU and LPU products below.

## System Applications

- Front-panel indicator shows status
- Works with INTELLIKEY's Quantum and EZ123 software system
- High speed key programming and verification
- Remote function capabilities - locate at remote locations via Hayes compatible modems
- Auto Refresh - Re Authorize keys in a stand alone mode.

Description	Part Number
Key Processing Unit (KPU)	100271
Remote KPU with Modem	100405
Lock Programming Unit (LPU) with EPU-L clip	101257
